PROJECTS

- Deviare Recruitment Platform
Feb 2020 - April 2020

This project is for the people of Africa for providing them the necessary technical skills through this platform in collaboration with the South African government.

AWS server and database has been used for hosting and storage purpose and Django for back-end & API.

DocuSign is used for the purpose of signing documents.

- Covid-Africa
April 2020 - present

It's a South African government project on COVID-19 in which all countries of Africa are involved in providing necessary information regarding COVID-19 to the people and initiating different projects by different country admins.

It's on the Django framework with JWT Rest framework and MongoDB database. I also managed the server at the development level.

- Snap Sponsor (iOS Application)
Aug 2020 - present

Working on an iOS project to ease the work of sponsorship between sponsor and sponsee in which I am handling the back-end of the application in python.

Authenticating using JSON web Token .

JSON APIs for data transmission and session management.

The database we are using is MongoDB and MongoDB cloud for storage and Firebase for push notification in iOS.
